### ELECTRICAL CONNECTION

### MECHANICAL LIMITS

|                               |             |                                                                                                                                                                           |
|-------------------------------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Service load                  | 120 %FS     | Load without any permanent deformation or change in calibration.                                                                                                          |
| Safe overload                 | 150 %FS     | The highest static load that may be applied once or briefly without mechanical damage.                                                                                    |
| Breaking load                 | $> 200$ %FS | Load at which permanent deformation or mechanical failure (fracture) occurs.                                                                                              |
| Max. transverse load (side)   | 50 %FS      | Maximum lateral or shear load that can be applied (e.g. due to misalignment or friction).                                                                                 |
| Max. permissible dynamic load | 70 %FS      | For cyclic or oscillating loads, the amplitude should not exceed this load to prevent fatigue failure. The dynamic load must be applied to the transducer central thread. |

## DIMENSIONS (mm)

## MOUNTING KITS AND ACCESSORIES

### TF 500/200

- Upper plate with a compression joint in AISI 304 stainless steel and rubber.
- Lower plate and block in AISI 304 stainless steel (TF500, TF2000) or in galvanized steel (TF2000Z).
- Compensation for any misalignments of the support plates of the structure.
- Locking screw to avoid damage during transport and installation.
- It can be used for systems with at least 3 supports.

50...2 000 kg  
0.5...20 kN

### PV80

- Adjustable upper plate in AISI 304 stainless steel (PPV80) or galvanized steel (PPV60Z).
- Lower plate and block in AISI 304 stainless steel (PV80) or galvanized steel (PV60Z).
- Constraint against lateral forces and anti-tilt by AISI 304 stainless steel (PV80) or galvanized steel (PV60Z) self-centering joint foot.
- Compensation for any misalignments of the support plates of the structure.
- Adjustable height.

50...2 000 kg  
0.5...20 kN

### PV

- Adjustable upper plate in AISI 304 stainless steel (PPV) or galvanized steel (PPVZ).
- Lower plate and block in AISI 304 stainless steel (PV) or galvanized steel (PVZ).
- Constraint against lateral forces and anti-tilt by AISI 304 stainless steel (TFPV, TFPV2000) or galvanized steel (TFPVZ) self-centering joint foot.
- Compensation for any misalignments of the support plates of the structure.
- Adjustable height.
- Locking screw to avoid damage during transport and installation.

50...2 000 kg  
0.5...20 kN

### PS

- Upper plate, lower plate and block in galvanized steel.
- Constraint against lateral forces and anti-tilt by ball-and-socket joint.
- Compensation for any misalignments of the support plates of the structure.
- Adjustable height

50...10 000 kg  
0.5...100 kN

## PV80EN1090

- Constraint against lateral forces and anti-tilt by AISI 304 stainless steel self-centering joint foot.
- Lower plate and block in AISI 304 stainless steel.
- Compensation for any misalignments of the support plates of the structure.
- Adjustable height.
- Locking screw to avoid damage during transport and installation.

50...5 000 kg  
0.5...50 kN

Certification:  
EN1090

## PVEN1090

- Constraint against lateral forces and anti-tilt by AISI 304 stainless steel self-centering joint foot.
- Lower plate and block in AISI 304 stainless steel.
- Compensation for any misalignments of the support plates of the structure.
- Adjustable height.
- Locking screw to avoid damage during transport and installation.

50...2 000 kg  
0.5...20 kN

Certification:  
EN1090

## TFPS2000

- AISI 304 stainless steel upper plate.
- Lower plate and block in galvanized steel (TFPS2000) or in stainless steel (TFPS2000INOX).
- Constraint against lateral forces and anti-tilt by means of ball-and socket joint with nut in galvanized C45 steel (TFPS2000) or in stainless steel (TFPS2000INOX).
- Compensation for any misalignments of the support plates of the structure.
- Adjustable height.
- Locking screw to avoid damage during transport and installation.

50...2 000 kg  
0.5...20 kN

## T12

- Upper plate with a compression joint in AISI 304 stainless steel and rubber.
- Lower plate and block in galvanized steel.
- Compensation for any misalignments of the support plates of the structure.
- Locking screw to avoid damage during transport and installation.
- It can be used for systems with at least 3 supports.

50...2 000 kg  
0.5...20 kN
